

TFCC Fiber Connector Cleaning Kit

The TFCC is a complete kit for cleaning fiber optic cable end faces and optical bulkhead connectors. As time passes dust can gather on the surfaces of the fiber which can potentially cause attenuation of the signal or even damage to the laser. By setting up a cleaning routine you can eliminate this possibility and ensure a trouble free system.

The TFCC contains the equipment needed to clean both the fiber connector end face as well as the bulkhead fitting that they are plugged into. It features a can of air to remove dust from the vicinity of the connection, a bag of sticklers to clean a mating sleeve, clean wipes for cleaning the connectors, a fiber connector cleaner for cleaning the end face of the fiber, a one click bulkhead cleaner for cleaning the fiber bulkhead connection and a handy canvas carrying bag.

Kit Contains:

- DCA1017 Canned Air
- MCC-FA1 Sticklers cleaners
- MCC-WFW Clean Wipes
- CLE-22 Fiber connector cleaner
- FCC-2.5 One click Cleaner
- Canvas carry bag

As an option a Toner FOM-400 Fiber Optic Microscope can be included for the inspection of the fiber end face.
