

TIBA-40-1200 DOCSIS 3.1 Compatible 2 Way Broadband Distribution Amplifier

TIBA-40-1200 Two Way Indoor Broadband Amplifier 1.2 GHz with GaAs-Hybrid / Power Doubling Technology, 40 dB Gain

Features

- 54-1220 MHz forward path, 5-42 MHz reverse (5-85 / 102-1220 & 5-204 / 258-1220 MHz options)
- 40 dB forward gain, 24 dB reverse
- Plug-in attenuators and equalizers
- GaAs power doubling technology (forward)
- Separate UL listed universal power supply
- Extruded aluminum housing with heat sink for optimum heat dissipation
- Includes TIBA PEQ Pad & EQ Kit

The Toner TIBA-40-1200 RF distribution amplifier is the latest addition to the Toner line of amplifiers designed for systems out to 1220 MHz such as those using expanded DOCSIS 3.1 frequencies. The TIBA amp features high performance GaAs-Hybrid silicone which provides better performance and better distortion characteristics than older PushPull and PHD type amplifiers. The amplifier is supplied with standard 5 - 42 / 54 - 1220 MHz diplex filters but has optional 5-85 / 102-1220 or 5-204 / 258-1220 MHz diplex filters available. It has a forward gain of 40 dB and a reverse gain of 24 dB. The amplifier features a plug-in forward attenuator and plug-in forward equalizer. Setup of the amplifier is with plug-in attenuator pads and equalizers in the input, midstage and output for precise settings. The reverse path has both input and output plug-in attenuator pads as well.

The TIBA is built in an extruded aluminum housing that is designed for heat dissipation as well as RFI. The cover is removable for access to the pads and equalizers. Power is with a UL listed plug in switched mode transformer 100-240 VAC that is supplied with US, British, and European plugs.
