

PACKETV Views

IPTV Controller / Manager

PacketV® Views is a fully configurable online IPTV controller that allows you to manage multiple IPTV account types and roles to simplify content access, maintenance, and publishing.

It runs directly in your browser, and maps IPTV media sources using a fully qualified Uniform Resource Identifier (URI).

What does Packet TV Views do?

-  It makes the viewing and sharing of IPTV content easier and more cost-effective
-  It provides a friendly, configurable UI to curate, store, publish, and control IPTV content
-  It offers multiple administrator and viewer categories for granular control

Who is it for?

-  PacketV® Views is ideal for any school, organization or business that relies on video streaming to communicate and educate
-  Teacher, trainers and technologists from K-12, community colleges, universities, government and corporations finally have an easy way to simplify the process of delivering dynamic digital content
-  PacketV® Views allows you to quickly and efficiently customize your digital stream for any audience

How does it work?

The software as a Service (SaaS) model minimizes client set-up and expenses saving you money on deployment, maintenance and server hardware

Content is stored in the cloud to minimize end-user hosting and storage requirements and allow fast, dependable access to content.

FEATURES & BENEFITS

HTML-based solution is compatible with most popular Web browsers

Affordable - Single-instance and enterprise licenses are available

Easy to set up and manage, doesn't require a tech specialist or IT professional

Leverages Software as a Service (SaaS) technology, minimizing end-user requirements and costs

Platform agnostic, works on and with any system

Compatible with open-source media player VLC from VideoLAN.org
