Toner passives transition to a wider frequency range

With the wide deployment of DOCSIS 3.1 which requires bandwidth to 1220 MHz we are upgrading all our drop passives to this bandwidth. The new models will have a suffix D31 at the end of their model like XGHS-2D31 or DCWRG-9D31

As we run out of the older 1000MHz passives we will start to substitute the D31 models at the same price

As of today we have done this with our DCWRG-6 so we will only be shipping DCWRG-6D31

In the near future our TST Taps, TLP line passives and TXMT Total taps will also transition to the 1220 MHz frequency range
