- LNB arm Not Included

Smaller, Lighter. Better Looking. And Versatile. The SL5 LNB for the DIRECTV Slimline dish is used to pick up high definition local channel programming from DIRECTV. It encompasses three LNBs to receive 101°, 110°, 119° degree satellite, plus the new Ka satellite (99°, 103°) for local HD MPEG4 programming. It can also be used with SWM-8 or SWM-16 adapters for more than eight tuners in the home. Plus, it's fully compatible with older "legacy" receivers. This ensures it can receive all HD broadcasts.
