

T.OX Video Overlay Headends

Transmitter that generates an optical output of 1550 nm, modulated by the incoming RF signal.

Refs. 234811 and 234826 generate an optimal output signal quality without requiring high input levels (between 75 and 90dB μ V / 15 and 60dBmV), delivering both analog and digital signals.

- Variable modulation depth (RF drive level) and precise optical power levels enables superior link optimization.
- Simple plug-and-play operation. OMI test point.
- User selectable Automatic Gain Control (AGC).
- Laser temperature control system.

Moreover, ref. 234826 is able to keep intermodulation features for distances above of 30Km.

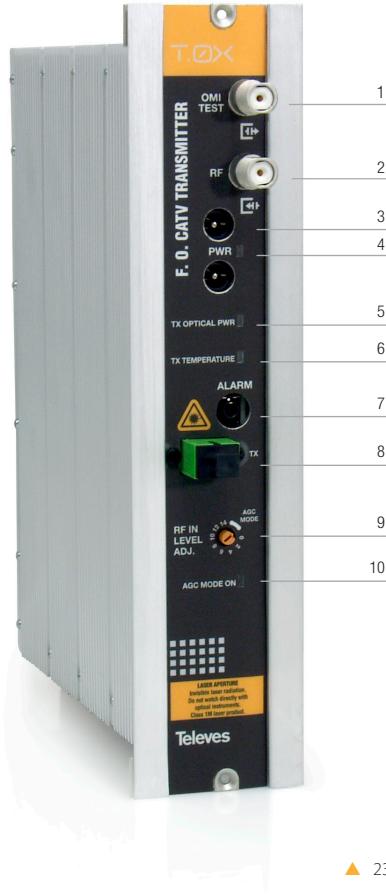

Ref. 234305 has an input margin of 2,1GHz, ideal for TVSAT signals distribution (by IF).

REF.	DESCRIPTION
234811	Optical Tx 1550nm 10dBm + AGC
234826	Optical Tx 1550nm 6dBm (w/external modulation) + AGC
234305	Optical Tx 1550nm 4dBm

CONNECTIONS

- 1 OMI Test point
- 2 RF input
- 3 Power BUS
- 4 On power led
- 5 Optical power led: green laser active, red laser alarm.
- 6 Laser temperature led: green laser temp OK, red laser temp ALARM.
- 7 Alarm connector
- 8 Optical Output (Laser aperture, class 1M laser)
- 9 RF control attenuation
- 10 AGC led: white AGC mode selected

OPTICAL TRANSMITTER
